

Robert Roscow

Chief Science Officer, Mydecine Inc

BIO:

Robert (Rob) Roscow is a dedicated biologist and inventor who values applying his creative skills to innovations that provide practical solutions in drug design, bioinformatics and genetic engineering. His business career began at Ebbu, a cannabis pharmacology and genetic engineering business, where he conceived of and developed a patent portfolio centered on enabling enhanced production of Cannabis resin and individual cannabinoids. Following the sale of Ebbu, he served as the global director of genetic research for Canopy Growth. He also serves as the genetic advisor at Victory Hemp Foods, where he dedicates his time to the improvement of hemp as a grain producing commodity crop. He is the Chief Science Officer and co-founder of Mydecine Innovations Group, where he has expanded his patent portfolio to include novel psychedelics and entactogens with enhanced properties for use in a clinical setting.
